## Premium<sup>+</sup> duck nest

A mechanical nest for ducks has been developed by Jansen Poultry Equipment after years of research. The basis of the research has been duck behaviour. Due to this development the duck breeder sector now has the possibility to mechanically collect eggs and to improve egg quality.

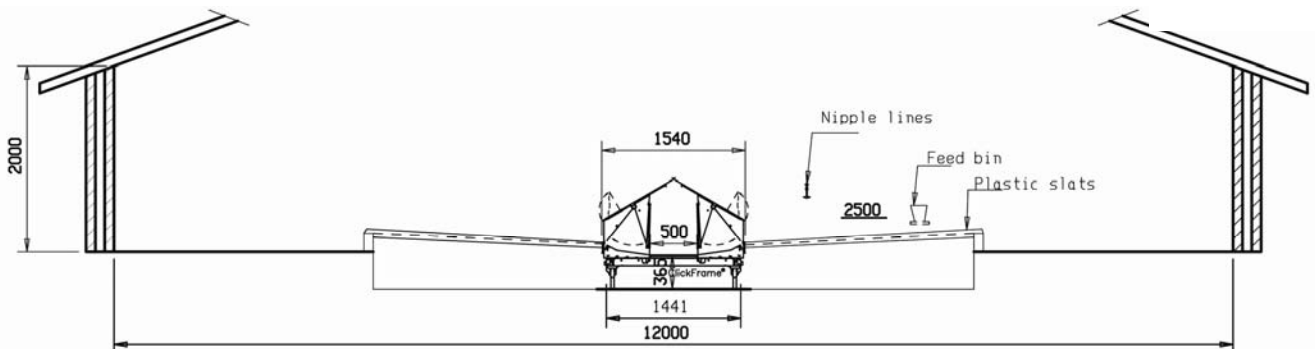

The system has been specially designed for ducks; the slat area slopes towards the nest and any outside nest eggs roll by themselves onto the egg belt. The nest is provided with an egg belt in the middle and a soft nest mat. The nest offers the ducks a safe and comfortable environment to lay their eggs

### Your advantages:

- Attractive environment for ducks to lay their eggs
- No outside nest eggs
- Expel system
- Open structure of the nest mat keeps the eggs clean
- Solid nest construction
- Durable and bird friendly materials
- Simple installation
- Easy to clean
- Low step-up onto the slats
- No obstruction at nest entrance
